Handmade in Poland

Manufactured in Poland

Kultura Dźwięku is a Polish brand that has been specializing in the production of speakers that combine tradition with modernity since 2020. We create speakers inspired by classic, vintage designs and bring proven concepts into the 21st century, adapting their character to contemporary trends and technologies. This is an offer for people who are looking for excellent sound quality and at the same time appreciate unique and stylish audio equipment.

Since 2025, Kultura has been expanding its offer, reaching out to customers across Europe. This development includes greater product availability, new finish configurations, and the ability to better tailor the offer to the expectations of foreign customers. We regularly participate in the Audio Video Show in Warsaw, presenting our latest designs to a wide audience. In 2025, we were awarded the Best Sound prize for a system based on Soul 3 speakers, which had their premiere at this show.

Quality

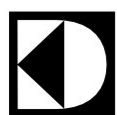

Every speaker is handmade, which guarantees exceptional quality and the utmost attention to detail.

Thanks to passion and many years of experience, each pair of speakers becomes a small work of art, offering an extraordinary acoustic experience. The unique character of the products is emphasized by natural veneer, whose individual, unique wood grain gives each piece a unique look. Kultura products are distinguished by the highest sound quality and offer a mature, consistent and detailed sound. At the same time, they maintain an exceptionally favorable price-quality ratio, making them an attractive alternative even to much more expensive constructions.

Warranty

Manufacturer provides a two-year warranty for its products, which confirms their quality and careful workmanship. The warranty covers both the components used and the carpentry work, ensuring safety and long-term, trouble-free use.

Speaker customization

Surface finish

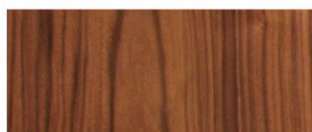

As **standard**, the columns are finished with a colorless matte varnish. As a **premium** finish, we offer high-gloss varnishing of the columns. This is a process that requires great precision and experience, as any imperfections in the surface become visible. The surface is varnished and polished multiple times to achieve a perfectly smooth, mirror-like effect. This is one of the most labor-intensive finishing technologies, guaranteeing an exclusive look for your product.

Natural veneers

Speakers are finished with natural veneers, which give each pair a unique grain pattern and an elegant, timeless character. American walnut and European oak veneers are available as **standard**.

American walnut

European oak

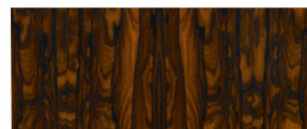

Exotic species such as bubinga and ziricote, due to their rarity, depth of color, and unique wood structure, are classified as **premium** finishes.

Bubinga

Ziricote

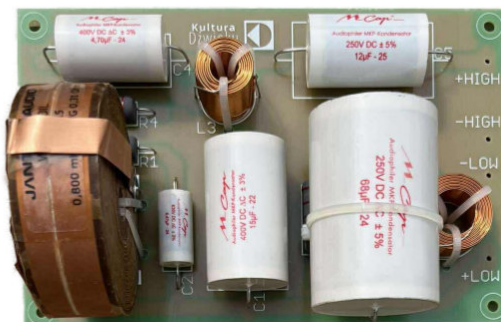

Crossover

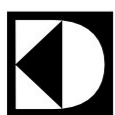

Standard crossovers use solid, proven components that ensure excellent sound quality and proper speaker performance. **Premium** versions use components with lower losses and higher linearity (including better capacitors and coils), which technically means a cleaner signal and less distortion. As a result, Standard sounds very good, while Premium offers even greater precision, space, and naturalness.

Standard crossover for the Soul2 model
